

## **NEW ANTI-LICE DEVELOPMENT**

### **DR. UZE DETECT, the only fine-tooth comb with self-cleaning accessory and UV LED Light**

(Buenos Aires, December 2017) DR. UZE DETECT, is the only fine-tooth comb on the national market designed with an innovative self-cleaning accessory that incorporates light, thanks to the 5 LEDs technology.

In order to fight pediculosis, it is important to consider that where there are lice, there are nits and if we do not remove them completely, the infestation cycle will not be cut. Therefore, examining and detecting are two fundamental steps in treatment.

In this process, the double effect of DR UV light. UZE DETECT allows the following:

- To attract the lice to UV light and then quickly catch and remove them with the fine-tooth comb.
- Nits, due to their opalescent white color, emit greater fluorescence to facilitate vision and the fine-tooth comb can be passed accurately in the affected hair areas

#### **Its main benefits:**

- It provides greater precision in the detection and elimination of nits and lice
- It includes an accessory with exclusive self-cleaning effect that slides through the interdental space of the fine-tooth comb, discarding all traces of nits and lice.
- To achieve greater hygiene, the combs are 100 percent stainless steel, which allows them to be sterilized after use.
- In addition, it has an anatomical handle and smooth teeth with rounded and polished tips that provide greater flexibility and softness, ideal for the delicate skin of children.

These products can be found in more than 4,000 pharmacies throughout the country and are exported to Spain, Italy, the United States, Canada and Uruguay.

**We appreciate its diffusion**
